

## **COMPATIBILITY LIST**

To ensure a safe installation and optimal lighting/dimming performance, source the exact dimming control model numbers that appear on this list. Read all footnotes for additional information. Please contact the dimmer switch manufacturer with inquiries about dimmer color/finish options.

<sup>\*</sup> Best performing controls for 10W & 20W OMNIDRIVE models are listed above. Dimmers compatible with OMNIDRIVE models ≥30W are also suitable for 10W & 20W models, but due to small load size the dimmer may emit a pop-on effect when preset to a low brightness and switched on.

### **NOTES**

Note <sup>1</sup> It's important to not load the dimming control more than the LED load capacity listed on this compatibility list. LED loads may exhibit an inrush current when switched on, which may overload the dimming control. These LED loads have been pre-calculated for easy reference (they are not listed on the dimming control unless advertised as an LED control). As a general rule of thumb, use the following formula to calculate the maximum LED load for all brands of compatible Incandescent (INC), Halogen (HAL), Magnetic Low Voltage (MLV), or Electronic Low Voltage (ELV) dimming controls:

$$L_{LED load} = D_{Dimmer load} \times .25$$

For example, let's calculate the LED load for the Lutron Diva INC/HAL Preset Dimmer (DV-600P). This dimmer has a 600W incandescent load.

$$L_{LED load} = 600 \text{W} \times .25 = 150 \text{W}$$

Note <sup>2</sup> Dimming Range is based on the minimum and maximum measured lux (lx) values of the dimming control.

### **VOLTAGE DROP CHARTS**

For best performance and lumen output, ensure proper wire gauge is installed to compensate for voltage drop of low voltage circuits.

#### **Example: 12V Voltage Drop & Wire Length Distance Chart**

Wire Gauge	10 W .83 A	20 W 1.7 A	30 W 2.5 A	40 W 3.3 A	50 W 2.1 A	60 W 4.2 A
18 AWG	34 ft.	17 ft.	11 ft.	8 ft.	6 ft.	5 ft.
16 AWG	54 ft.	27 ft.	18 ft.	13 ft.	10 ft.	9 ft.
14	86 ft.	43 ft.	29 ft.	21 ft.	17 ft.	1/

10	199 ft.	99 ft.	66 ft.	49 ft.	39 ft.	35 .

Determine load size. Let's assume load is 55 W. Round up to nearest load.

Determine distance from driver to load. Let's assume the distance is 20 ft.

It's recommended to install 12 AWG to eliminate excess voltage drop.
